

PROJECT REPORT

OF

RAILWAY RESERVATION SYSTEM

Done By,

1. Putchala Venkata Siva Nagu ; Reg No:12103554
2. Yaperla Guru Raghavendra Reddy; Reg No:12103396
3. Sunkari Guru Naidu; Reg No:12103411

Section:K21KP.

INTRODUCTION:

In our country The railway reservation system facilitates the passengers to enquiry about the trains available on the basis of source and destination, booking and cancellation of tickets, enquiry about the status of the booked ticket, etc. The aim of case study is to design and develop a data base maintaining records of different trains, train status and passengers . This project contains introduction to the railways reservation system. It is the computerized system of reserving the seats of train seats in advance. It is mainly used for a long route. Online reservation has made the process for the reservation of seats very much easier than ever before.

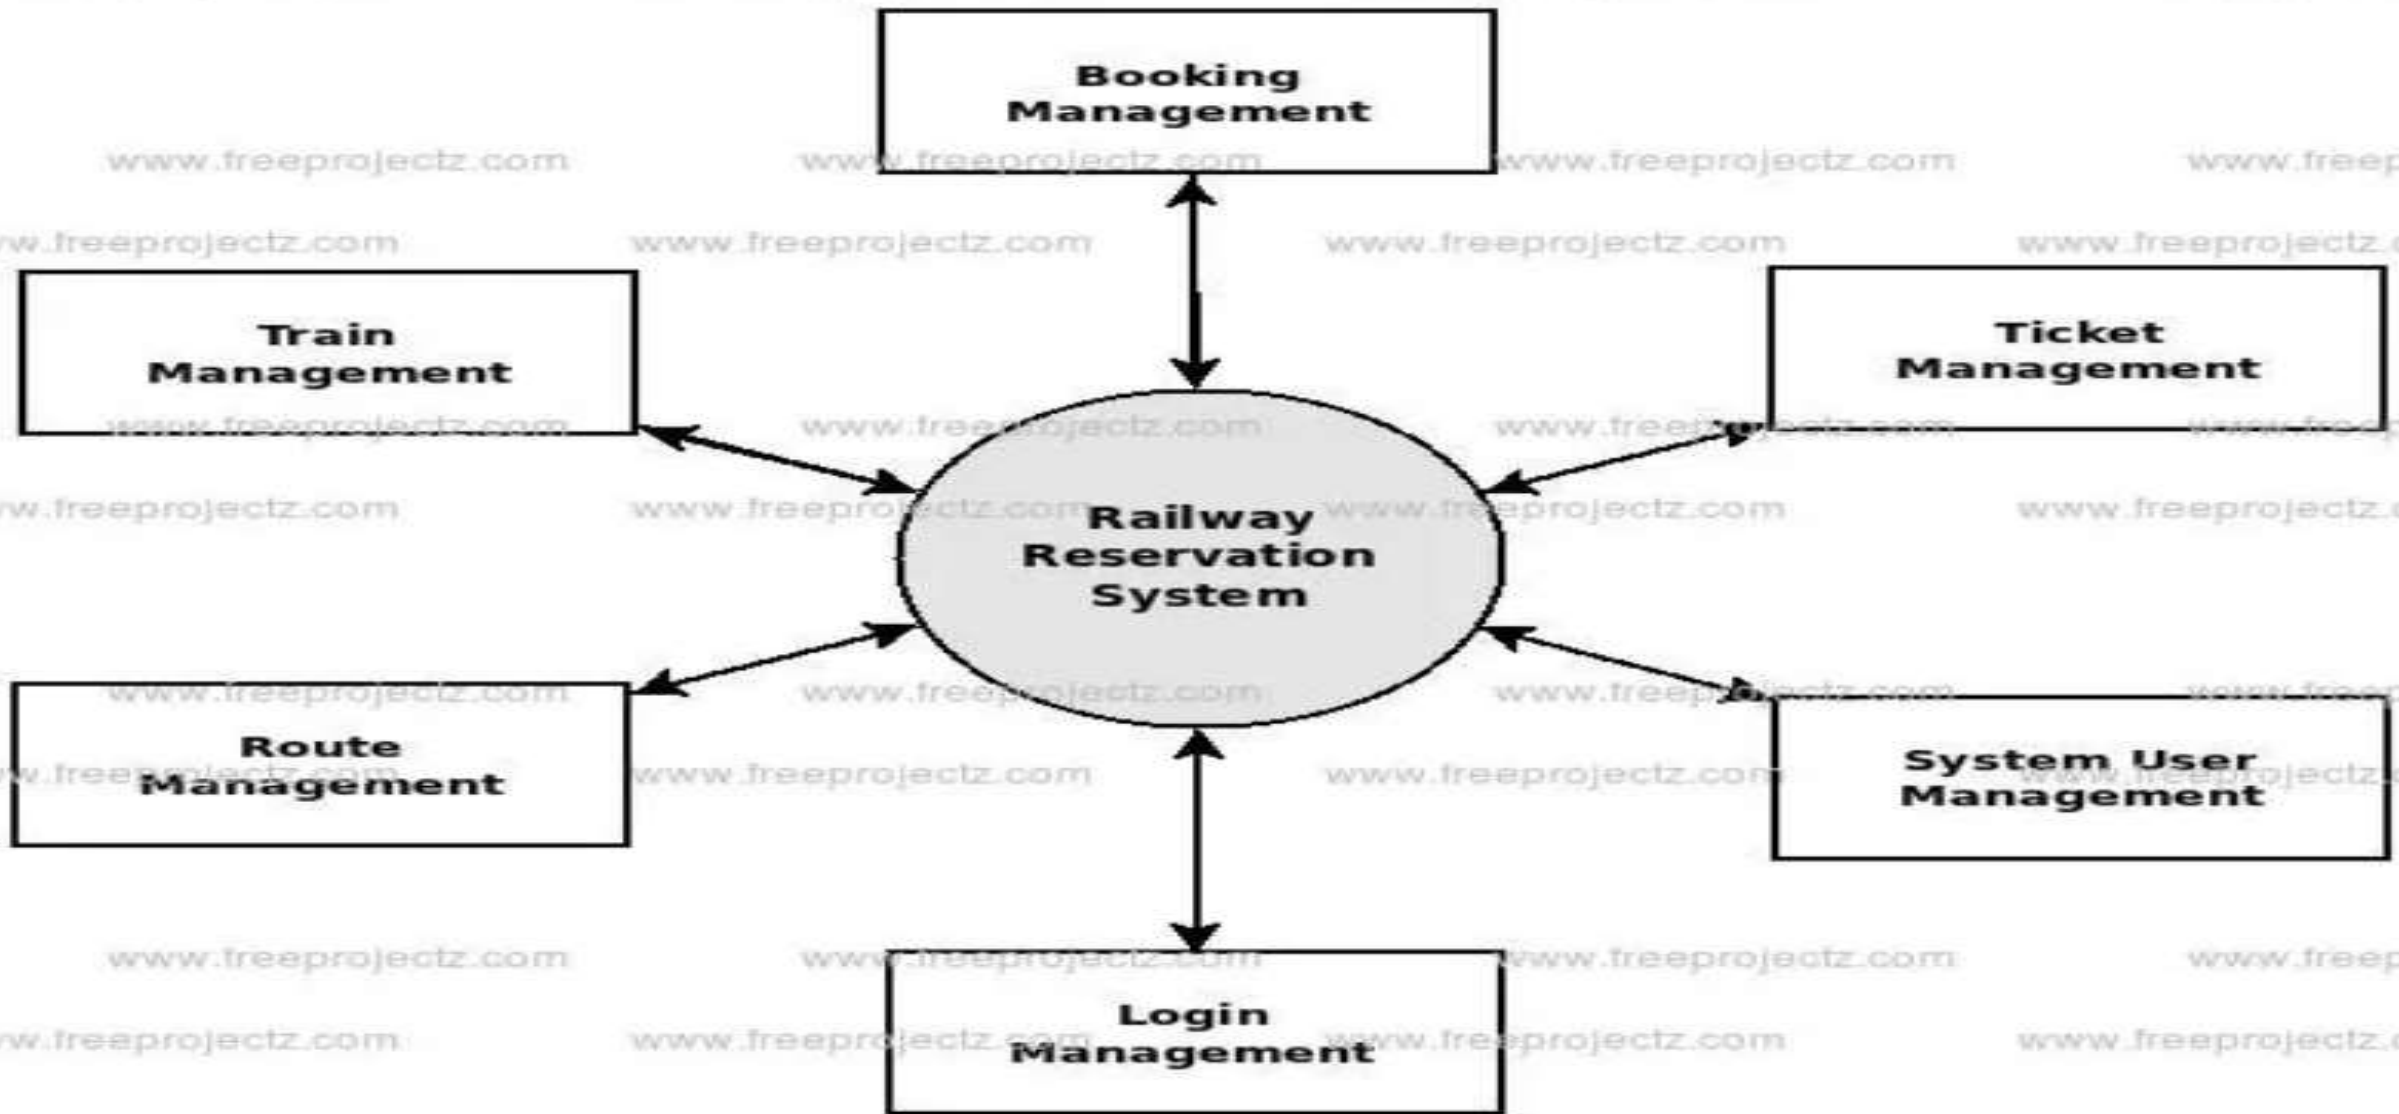

In our country India, there are number of counters for the reservation of the seats and one can easily make reservations and get tickets. Railway reservation system, has described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus it will help organization it better utilization of resources . Administrator of the project, with the help of a password,

can enter new train record, display all train records, modify train records and delete train records. The record of train includes its number, name, source, destination, and days on which it is available, whereas record of train status includes dates for which tickets can be booked, total number of seats available, and number of seats already booked.

OBJECTIVE:

The main objective of the Railway Reservation System is **to manage the details of Train, Booking, Payment, Seat, Ticket**. It manages all the information about Train, Customer, Ticket, Train. The project is totally built at administrative end and thus only the administrator is guaranteed the access.

CONCLUSION/FUTURE SCOPE:

The main aim of developing Reservation System is to provide all information that is required by the users. User friendliness is a must that is the user get the details without complicated searching procedures. Other important requirements of software are data security, extensibility and maintainability. All these features are included in this web application.

The scope of this system in creating Reservation is that, from any Railway Station we can Create Reservation, which is updated automatically in all the stations. Hence, there is no confusion to the Reservation Clerk in all the stations to create the Reservation. This can be possible by maintaining Global Database.
